A Handbook of Lattice Spacings and Structures of Metals and Alloys W. B. Pearson 2013-09-17 A Handbook of Lattice Spacing and Structures of Metals and Alloys is a 12-chapter handbook that describes the structures and lattice spacings of all binary and ternary alloys. This book starts with an introduction to

the accurate determination of structure and lattice spacings. The subsequent chapters deal with the role of structure determination and lattice spacings in alloy formation, as well as the application of this determination to the equilibrium diagram examination. These topics are followed by discussions on the correlation of lattice spacing and magnetic property, including X-ray crystallographic data for those structures allotted a "Strukturbericht type. The remaining chapters contain table lists information about the crystal structures, densities, and expansion coefficients of the elements. These chapters also present further information about lattice spacing and structure determination on metals in alphabetical order. This book is of

value to physicists and metallurgists.

Handbook of Radiotherapy Physics
Philip Mayles 2021-12-31 From the essential background physics and radiobiology to the latest imaging and treatment modalities, the updated second edition of Handbook of Radiotherapy Physics: Theory & Practice covers all aspects of the

subject. In Volume 1, Part A includes the Interaction of Radiation with Matter (charged particles and photons) and the Fundamentals of Dosimetry with an extensive section on small-field physics. Part B covers Radiobiology with increased emphasis on hypofractionation. Part C describes Equipment for Imaging and Therapy including MR-guided linear accelerators. Part D on Dose Measurement includes chapters on ionisation chambers, solid-state detectors, film and gels, as well as a detailed description and explanation of Codes of Practice for Reference Dose Determination including detector correction factors in small fields. Part E describes the properties of Clinical (external) Beams. The various methods (or 'algorithms') for Computing Doses in

Patients irradiated by photon, electron and proton beams are described in Part F with increased emphasis on Monte-Carlo-based and grid-based deterministic algorithms. In Volume 2, Part G covers all aspects of Treatment Planning including CT-, MR- and Radionuclide-based patient imaging, Intensity-Modulated Photon Beams, Electron and Proton Beams, Stereotactic and Total Body Irradiation and the use of the dosimetric and radiobiological metrics TCP and NTCP for plan evaluation and optimisation. Quality Assurance fundamentals with application to equipment and processes are covered in Part H. Radionuclides, equipment and methods for Brachytherapy and Targeted Molecular Therapy are covered in Parts I and J, respectively. Finally,

Part K is devoted to Radiation Protection of the public, staff and patients. Extensive tables of Physical Constants, Photon, Electron and Proton Interaction data, and typical Photon Beam and Radionuclide data are given in Part L. Edited by recognised authorities in the field, with individual chapters written by renowned specialists, this second edition of Handbook of Radiotherapy Physics provides the essential up-to-date theoretical and practical knowledge to deliver safe and effective radiotherapy. It will be of interest to clinical and research medical physicists, radiation oncologists, radiation technologists, PhD and Master's students.
